

Epic	Story ID	User Story	Acceptance Criteria
Configure Monitoring	US-1.1	As a Case Desk staff member, I want to configure the legal topics and keywords to monitor so that the workflow retrieves judgments relevant to our areas of interest.	- Staff can configure one or more monitoring topics. - Keyword lists can be maintained for each topic. - Configuration is stored for future workflow runs.
	US-1.2	As a Case Desk staff member, I want the workflow to run automatically or be triggered manually so that I can retrieve new judgments when required.	- Workflow runs according to the configured schedule. - Users can manually trigger the workflow. - Failed executions are logged.
Judgment Retrieval	US-2.1	As a Case Desk staff member, I want newly published judgments retrieved automatically so that I no longer manually search Find Case Law.	- Workflow retrieves newly published judgments. - Metadata is extracted successfully. - Failed retrievals are recorded.
	US-2.2	As a Case Desk staff member, I want previously processed judgments ignored so that duplicate work is avoided.	- Duplicate judgments are detected. - Duplicate judgments are not processed again.
Metadata & Relevance Assessment	US-3.1	As a Case Desk staff member, I want judgment metadata extracted automatically so that each judgment can be assessed for relevance.	- Case title, court, publication date and tags are extracted where available. - Metadata is stored with the judgment record.
	US-3.2	As a Case Desk staff member, I want judgments assessed for relevance so that potentially relevant judgments are prioritised for review.	- The system analyses a judgment using its content and extracted metadata. - Judgments are assigned a relevance score. - An easy-to-understand summary explaining relevance is generated.
Triage	US-4.1	As a Case Desk staff member, I want to review retrieved judgments before AI summarisation so that I remain in control of which cases are processed.	- The triage queue displays metadata, relevance score and matched keywords. - Users can select a judgment for deeper extraction. - Judgments remain in the queue until a decision is made.
	US-4.2	As a Case Desk staff member, I want to approve or reject a judgment for summarisation so that only relevant cases proceed to AI processing.	- Users can approve or reject a judgment. - Approved judgments proceed to AI summarisation. - Rejected judgments do not proceed. - Decisions are recorded in the audit log.
AI Summarisation	US-5.1	As a Case Desk staff member, I want a plain-English briefing generated from an approved judgment so that I can quickly understand its contents.	- A briefing is generated using the approved judgment. - The briefing follows a defined template. - Key facts, legal issues and outcome are included.
	US-5.2	As a Case Desk staff member, I want generated briefings to accurately reflect the source judgment so that misinformation is not introduced.	- No unsupported statements appear. - No legal advice is generated. - Facts are traceable to the source judgment.
Review Queue	US-6.1	As a Case Desk staff member, I want generated briefings placed into a review queue so that I can review them before they are considered complete.	- Generated briefings appear in the review queue. - Users can open the briefing and source judgment. - Briefing status is displayed.
	US-6.2	As a Case Desk staff member, I want to accept or make changes to a generated briefing so that briefing quality is maintained.	- Users can mark a briefing as accepted or make changes to it themselves. - The review decision is stored. - Updated status is reflected in the review queue.
Audit Trail	US-7.1	As a Case Desk staff member, I want workflow decisions recorded so that previous work is traceable.	- Every workflow stage is timestamped. - Judgment data is stored. - Relevance scores are stored. - User decisions are stored. - Audit records are retained.
	US-7.2	As a Case Desk staff member, I want to search previous judgments so that I avoid repeating work.	- Users can search processed judgments. - Rejected judgments remain searchable. - Previous decisions are displayed.
Dashboard	US-8.1	As a Case Desk staff member, I want separate triage and review queues so that I can manage judgments at each stage of the process.	- The dashboard displays a triage queue. - The dashboard displays a review queue. - Queue contents update after workflow and dashboard actions.
	US-8.2	As a Case Desk manager, I want workflow metrics displayed so that I can monitor operational performance.	- Total judgments processed are displayed. - Judgments awaiting triage are displayed. - Briefings awaiting review are displayed.
Error Handling & Notifications	US-9.1	As a Case Desk staff member, I want to be notified if the workflow fails so that I can investigate promptly.	- Failed workflow executions are logged and displayed on the dashboard. - Error details are logged. - Failed executions can be retried.
	US-9.2	As a System Administrator, I want temporary API failures handled gracefully so that processing remains reliable.	- Failed requests are retried. - Persistent failures are logged. - Workflow exits safely if retries fail.
