

Scenario ID	Test Case ID	Test Case	Expected Result
TS-01	TC-01.1	Configure one monitoring topic	Topic is saved successfully
	TC-01.2	Add keywords to a monitoring topic	Keywords are stored successfully
	TC-01.3	Restart the workflow after configuration	Configuration persists between executions
TS-02	TC-02.1	Allow scheduled workflow to execute	Workflow starts automatically
	TC-02.2	Trigger workflow manually	Workflow executes successfully
	TC-02.3	Retrieve newly published judgments	New judgments are retrieved successfully
	TC-02.4	Retrieve a malformed judgment record	Workflow logs the error and continues processing remaining judgments
	TC-02.5	Retrieve an unusually large batch of judgments	Workflow queues or batches processing without failure
TS-03	TC-03.1	Process the same judgment twice	The judgment is processed only once
	TC-03.2	Process multiple unique judgments	Each unique judgment is processed once
	TC-04.1	Extract metadata from a judgment	Title, court, publication date and tags are extracted
TS-04	TC-04.2	Generate case summary	A concise summary of the judgment is generated
	TC-04.3	Generate relevance assessment	Relevance is assigned a bucket (Red, Amber, Green) and rationale is given
	TC-04.4	Assess a judgment highly relevant to topic list	Judgment is assigned Green relevance
	TC-04.5	Assess a judgment somewhat relevant to topic list	Judgment is assigned Amber relevance
	TC-04.6	Assess a judgment not relevant to topic list	Judgment is assigned Red relevance
	TC-04.7	Generate a self-confidence assessment	Relevance assignment is assigned a confidence bucket (Red, Amber, Green)
	TC-04.8	Assess a judgment with missing metadata	AI assessment completes with Red confidence and flags appropriate reason
	TC-04.9	Assess an exceptionally long judgment	Workflow truncates the judgment content
	TC-04.10	Assess a judgment containing ambiguous legal terminology	AI assessment completes with Red or Orange confidence and flags appropriate reason
TS-05	TC-05.1	View the triage queue	Metadata, matched keywords and relevance bucket are displayed
	TC-05.2	Approve a judgment	Judgment proceeds to AI summarisation
	TC-05.3	Reject a judgment	Judgment does not proceed to summarisation
	TC-05.4	Leave a judgment without a decision	Judgment remains in the triage queue
TS-06	TC-06.1	Generate a briefing from an approved judgment	Briefing is generated successfully
	TC-06.2	Validate briefing structure	Briefing follows the defined template
	TC-06.3	Review briefing contents	Key facts, legal issues and outcome are included
	TC-06.4	Generate a briefing from an exceptionally long judgment	Workflow truncates the judgment content
	TC-06.5	Judgment contains missing sections	Briefing identifies unavailable information and flags it with the output
TS-07	TC-07.1	Compare briefing against the original judgment	Briefing accurately reflects the source judgment
	TC-07.2	Check for unsupported statements	No hallucinated or unsupported content is present
	TC-07.3	Check for legal advice	No legal advice is included
TS-08	TC-08.1	Open the review queue	Generated briefings are displayed
	TC-08.2	Open a briefing and its source judgment	Both documents are accessible together
	TC-08.3	Accept a generated briefing	Status updates to Accepted and is removed from the review queue
	TC-08.4	Edit a generated briefing	Briefing can be edited or rewritten
	TC-08.5	Commit edits to a briefing	Changes are saved successfully
TS-09	TC-09.1	Complete an end-to-end workflow	All workflow stages are recorded in the audit log
	TC-09.2	Search for a processed judgment	Judgment is returned in search results
	TC-09.3	Search for a rejected judgment	Rejected judgment is returned in search results
	TC-09.4	View an audit record	Workflow timestamps, relevance bucket and user decisions are displayed
TS-10	TC-10.1	Open the dashboard	Triage and review queues are displayed
	TC-10.2	Approve a judgment in the triage queue	Triage queue updates automatically
	TC-10.3	Generate a briefing	Review queue updates automatically
	TC-10.4	View dashboard metrics	Processed judgments, triage count and review count are displayed
TS-11	TC-11.1	API does not return a response	Failed request is retried
	TC-11.2	API continuously does not return a response	Failure is logged after retry limit is reached
	TC-11.3	Workflow fails due to an internal error	Failure is logged and displayed on the dashboard
	TC-11.4	Chatbot service is unavailable	Failure is logged
	TC-11.5	Database unavailable during processing	Workflow logs the failure and retries without data loss
	TC-11.6	AI returns an invalid response format	Response is rejected and workflow escalates the judgment for manual review
